BIOGRAPHY

I am a Software Developer who is passionate about building my ideas into the software that I create. With a degree of Bachelor in Information System from Mikroskil University and a background in software house company, I have obtained and use my skills to utilize my passion into building the best ways in the software world.

At PT Witech Enterprise, I provided maintenance for my company and its client project by optimization query for process data in order to make weight bridge apps. Prior to working with PT Witech Enterprise, I was the Backend Web Developer at PT Pundi Mas Berjaya for 2 years, where I also contributed to my company's client project for optimization query for data processing. I am an eager individual who loves to develop a high-performance data processing system that reduced query execution time which at the same time targeting significant improvement towards the overall system efficiency.

I aim to use my programming skills to bring the best of my potential for the best apps that I could possibly create.
